

**CSE 417**  
**Algorithms and Complexity**

Autumn 2024  
Lecture 29  
NP-Completeness and Beyond

2

## Announcements

- Exam practice problems on course homepage
- Final Exam: Monday, December 9, 8:30 AM

Mon, Dec 2	NP-Completeness
Wed, Dec 4	NP-Completeness
Fri, Dec 6	NP-Completeness and Beyond
Mon, Dec 9	Final Exam

- This is my last lecture

2

## NP-Completeness Proofs

- Prove that problem X is NP-Complete
  - Show that X is in NP (usually easy)
  - Pick a known NP complete problem Y
  - Show  $Y \leq_p X$

3

**Reducibility Among Combinatorial Problems**

FIGURE 1 - Complete Problems

APRIL GROHNE

4

## Populating the NP-Completeness Universe

- Circuit Sat  $\leq_p$  3-SAT
- 3-SAT  $\leq_p$  Independent Set
- 3-SAT  $\leq_p$  Vertex Cover
- Independent Set  $\leq_p$  Clique
- 3-SAT  $\leq_p$  Hamiltonian Circuit
- Hamiltonian Circuit  $\leq_p$  Traveling Salesman
- 3-SAT  $\leq_p$  Integer Linear Programming
- 3-SAT  $\leq_p$  Graph Coloring
- 3-SAT  $\leq_p$  Subset Sum
- Subset Sum  $\leq_p$  Scheduling with Release times and deadlines

5

## Coping with NP-Completeness

- Approximation Algorithms
- Exact solution via Branch and Bound
- Local Search

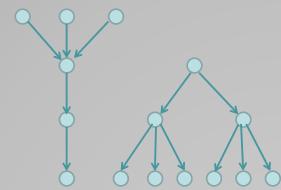

I can't find an efficient algorithm, but neither can all these famous people.

6

1

## Multiprocessor Scheduling

- Unit execution tasks
- Precedence graph
- K-Processors
- Polynomial time for k=2
- Open for k = constant
- NP-complete if k is part of the problem

7

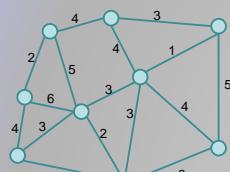

## Highest level first is 2-Optimal

Choose k items on the highest level  
Claim: number of rounds is at least twice the optimal.

8

## Christofides TSP Algorithm

- Undirected graph satisfying triangle inequality

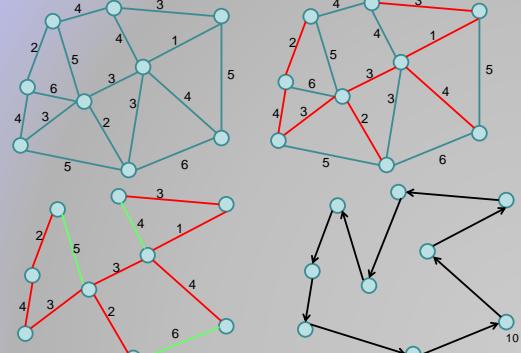

1. Find MST
2. Add additional edges so that all vertices have even degree
3. Build Eulerian Tour

3/2 Approximation

9

## Christofides Algorithm

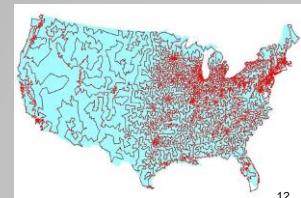

## Branch and Bound

- Brute force search – tree of all possible solutions
- Branch and bound – compute a lower bound on all possible extensions
  - Prune sub-trees that cannot be better than optimal

11

## Branch and Bound for TSP

- Enumerate all possible paths
- Lower bound, Current path cost plus MST of remaining points
- Euclidean TSP
  - Points on the plane with Euclidean Distance
  - Sample data set: State Capitals

12

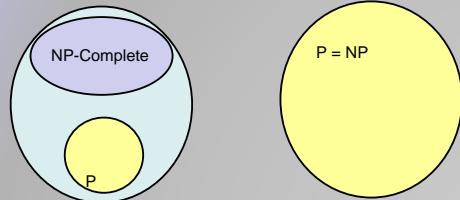

## Local Optimization

- Improve an optimization problem by local improvement
  - Neighborhood structure on solutions
  - Travelling Salesman 2-Opt (or K-Opt)
  - Independent Set Local Replacement

13

## What we don't know

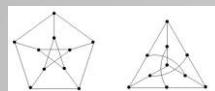

- P vs. NP

14

## If $P \neq NP$ , is there anything in between

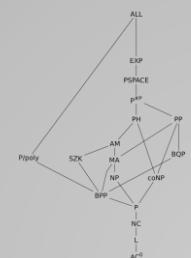

- Yes, Ladner [1975]
- Problems not known to be in P or NP Complete
  - Factorization
  - Discrete Log
  - Graph Isomorphism

15

## Complexity Theory

- Computational requirements to recognize languages
  - Models of Computation
  - Resources
  - Hierarchies
- [//complexityzoo.net](http://complexityzoo.net)

16

## Time complexity

- P: (Deterministic) Polynomial Time
- NP: Non-deterministic Polynomial Time
- EXP: Exponential Time

17

## Space Complexity

- Amount of Space (Exclusive of Input)
- L: Logspace, problems that can be solved in  $O(\log n)$  space for input of size  $n$ 
  - Related to Parallel Complexity
- PSPACE, problems that can be required in a polynomial amount of space

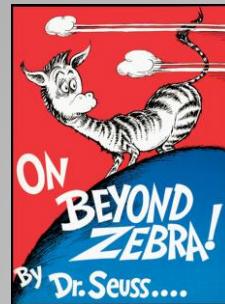

18

## Other types of computation

- Randomization
  - Can you solve problems faster with a random number generator?
- Quantum Computers
  - Can you solve problems faster if you have quantum bits which allow superposition?
    - Probably yes: Shor's Integer Factoring algorithm

19

## So what is beyond NP?

20

## NP vs. Co-NP

- Given a Boolean formula, is it true for some choice of inputs
- Given a Boolean formula, is it true for all choices of inputs

21

## Problems beyond NP

- Exact TSP, Given a graph with edge lengths and an integer K, does the minimum tour have length K
- Minimum circuit, Given a circuit C, is it true that there is no smaller circuit that computes the same function as C

22

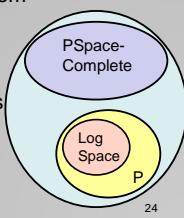

## Polynomial Hierarchy

- Level 1
  - $\exists X_1 \Phi(X_1)$ ,  $\forall X_1 \Phi(X_1)$
- Level 2
  - $\forall X_1 \exists X_2 \Phi(X_1, X_2)$ ,  $\exists X_1 \forall X_2 \Phi(X_1, X_2)$
- Level 3
  - $\forall X_1 \exists X_2 \forall X_3 \Phi(X_1, X_2, X_3)$ ,  $\exists X_1 \forall X_2 \exists X_3 \Phi(X_1, X_2, X_3)$

23

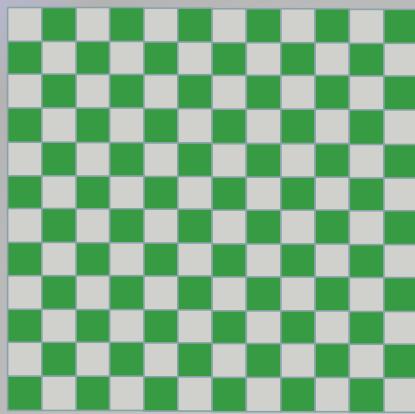

## Polynomial Space

- Quantified Boolean Expressions
  - $\exists X_1 \forall X_2 \exists X_3 \dots \exists X_{n-1} \forall X_n \Phi(X_1, X_2, X_3 \dots X_{n-1}, X_n)$
- Space bounded games
  - Competitive Facility Location Problem
  - N x N Chess
- Counting problems
  - The number of Hamiltonian Circuits

24

## N X N Chess

## Even Harder Problems

```
public int[] RecolorSwap(int[] coloring) {  
    int k = maxColor(coloring);  
  
    for (int v = 0; v < nVertices; v++) {  
        if (coloring[v] == k) {  
            int[] nbhColorCount = ColorCount(v, k, coloring);  
            List<Edge> edges1 = vertices[v].Edges;  
  
            foreach (Edge e1 in edges1) {  
                int w = e1.Head;  
                if (nbhColorCount[coloring[w]] == 1)  
                    if (RecolorSwap(v, w, k, coloring))  
                        break;  
            }  
        }  
    }  
    return coloring;  
}
```

Is this code correct?

26

## Halting Problem

- Given a program P that does not take any inputs, does P eventually exit?

27

## Impossibility of solving the Halting Problem

Suppose  $\text{Halt}(P)$  returns true if  $P$  halts, and false otherwise

Consider the program  $G$ :

What is  $\text{Halt}(G)$ ?

```
bool G {  
    if (Halt(G)){  
        while (true);  
    }  
    else {  
        return true;  
    }  
}
```

28

## Undecidable Problems

- The Halting Problem is undecidable
- Impossible problems are hard . . .

29

*That's all Folks!*
